PROFILE

With over 10 years of experience in software development, I have specialized in **C#, .NET Core, ASP.NET, PostgreSQL, and MSSQL technologies**. I have extensive experience in building **high-performance, scalable, and reliable software solutions**.

While I specialize in **backend development**, I also have knowledge of **Vue.js and modern frontend technologies**. I actively work on **microservices architecture, REST API design, database optimization, and enterprise software solutions**.

As a software developer who is always eager to learn, I keep up with best software development practices and focus on delivering **innovative and optimized solutions**.

WORK EXPERIENCE

Software Developer

SmartIQ Teknoloji A.Ş.

2023-Present

- I was responsible for the development of the CMS module that the company developed for the small/medium/large-scale automotive sector. I ensured the module was ready for use by developing the required features on both the backend and frontend sides, or by resolving the errors that occurred.
- For a different project of the company, I worked on the crawler operations application, ensuring that the crawler operations for the relevant sections of the websites assigned to me were completed and that the data was prepared.
- The developments were carried out using RESTful services.
- Technologies we used within the company: .NET Core, Vue.js, and PostgreSQL for the database.

Software Developer

Erkas Telekomünikasyon San. Tic. A.Ş.

2012-2022

- Managing the software side of the company projects, including the websites MobilCadde.com (B2C), Mobiletisim.com, and Erkasbayi.com (B2B).
- Managing the databases of these websites, carrying out maintenance, and ensuring smooth version transitions.
- Solving software issues on the websites, preparing new features, and deploying these features on the websites after testing.
- Preparing integrations with marketplaces (Hepsiburada, Trendyol, N11, GittiGidiyor, Morhipo, PttAVM), shipping companies (Aras, Yurtiçi, MNG), and invoice systems (Logo) according to needs.
- Technologies we used within the company: Classic ASP (for the web), C# (for integrations), and MSSQL for the database.

Software Developer

Tick Tock Boom Digital PR & Marketing

2010-2012

- I was part of the team developing BoomSonar, an internet and social media monitoring application. I worked on the development of the BoomSonar management panel used internally by the company, adding new features according to needs and deploying these features after testing.
- Technologies we used within the company: ASP.NET WebForms, MongoDB, and MSSQL.
